

PRESS RELEASE

Hipotels Hotels & Resorts enters an agreement with Validated ID for its digital signature services

5 December 2022.

Hipotels Hotels & Resorts continues to pursue its sustainability goals by establishing an agreement with the company **Validated ID** for the setup of a digital signature service at the reception in its hotels.

Validated ID offers a system for creating digital files with yearly folders that store all the signatures recorded so they can be accessible at any time. In the words of **Gabriel Abraham**, Vice-President of **Hipotels Hotels & Resorts**, “the implementation of this service will enable us to reduce the use of paper and offer our clients the guarantee that their data will be entirely validated within a solid legal framework and processed with complete confidentiality.” For **Santi Casas**, CEO of **Validated ID**, “we are thrilled to collaborate with an innovative partner like Hipotels which has the market know-how to provide a solid e-signature service to their clients. In addition, we share the same philosophy in that our work must adhere to the highest security and data protection standards.”

About Hipotels Hotels & Resorts

Hipotels Group has been spearheading the development of tourism in Majorca for over 50 years and offers one of the highest number of bed-places on the island. Joan Lull, founder of the group, has imbued the company with his personality and vision, first focusing on careful expansion in Majorca before expanding to other destinations including Cadiz, Lanzarote, and more recently, Cancun. With a development model based on the regular renovation of hotel

infrastructure, the company is able to create a close-knit management style rooted in long-term relationships with both clients and employees.

About Validated ID

Founded in 2012, Validated ID offers secure identity solutions to guarantee people's privacy, rights and freedoms. With clients in 35 countries and over 250 partners, Validated ID provides a system that adapts to in-person and remote situations, combining cryptography and biometrics to sign documents with complete legal validity. Capable of being integrated into over 150 types of software, Validated ID is used by public authorities and in areas such as finance, insurance, human resources, health, and logistics.
